

ABSTRACT

A display apparatus allowing observation of the abnormal state of control target equipment is provided. A process performed by a control unit of the display apparatus capable of reproducing a moving image includes the steps of: receiving an input of an analog video signal (S602); converting the video signal to a digital signal (S604); reading time data (S606); generating video data including the time data and the digital signal in relation with each other (S608); and storing the video data in a video data storing unit (S610).
